

The UGO Reset, the 'Swiss army knife' of call point test and reset keys for fire alarm systems.

The UGO reset keeps the keys that fit most major fire alarm call point brands, all integral in one handy, easy-to-use, trouser-pocket-sized case. Each key can be folded out when required and folded back afterwards so they cannot be lost, making it quick, easy and hassle-free to test and reset call points on site. The Ugo Reset from Vimpex can be used on all leading alarm brands, including Synaps, KAC, Global Fire plus others.
